## Sunlight and Vitamin D

### Why sunlight and Vitamin D Matter for your health

Did you know that getting a little sunlight each day can help you feel better and stay healthy? Sunlight helps your body make vitamin D, which is an important nutrient. Vitamin D helps keep your bones strong and supports your immune system. It also helps with mood, which means it can help you feel happier.

As we get older, our bodies have a harder time making vitamin D from the sun. This means elder Americans need to be extra careful to get enough vitamin D. Without enough vitamin D, bones can become weak and more likely to break. It can also make it harder to fight off illnesses.

## Sunlight and Vitamin D

The good news is that a short time in the sun can help. Spending 10 to 30 minutes outside a few times per week can be enough, especially if your arms or face are exposed to sunlight. Be sure to avoid staying out too long without sunscreen, though. Too much sun can hurt your skin.

### VITAMIN D DEFICIENCY Affects Every Part of the Body

and supplements. Some foods like eggs, fish, and fortified milk have vitamin D. Your doctor may also suggest a vitamin D pill if you are not getting enough sunlight or your vitamin D is low.

Taking care of your health is important at any age. Getting some sun and enough vitamin D is a simple way to stay strong and feel good. So open those curtains, take a walk outside, or enjoy a sunny spot—it's good for you!

# VITAMIN D

## Vitamin D is important for:

- ✓ healthy bones
- ✓ muscle function
- ✓ normal cell function
- ✓ supporting immune function

The human body produces **vitamin D** when the skin is exposed directly to sunlight (UVB rays)

**Consider** when you train – is it during the optimal vitamin D window? [Check out our handy tips below](#)

### Short shadow

The **best time** of day to **maximise** your vitamin D production from the sun is when your **shadow is shorter** or the same height as you

## How to Optimise Vitamin D Production

- **15-20 minutes** of direct sun exposure from **April to September**, in **Scotland**, is normally enough for healthy individuals.
- Train or eat lunch **outside** in shorts when your shadow is **short**.
- Skin must be **directly exposed** to the sun *i.e.*, without sunscreen & wearing shorts and t-shirt.
- **HOWEVER.....** Care needs to be taken to **prevent sunburn** by moving out of the sun or covering up before the skin reddens.
- **Sunlight is the BEST source of vitamin D**, however, there are some **dietary sources** which can be consumed to support production from the sun.

# Fruit—Honeydew

Honeydew is a juicy, sweet melon that comes from a type of muskmelon, specifically a cultivar of the species *Cucumis melo*. It is part of the same family as cantaloupes and other melons.

Honeydew is thought to have cultivated from West Africa or the Middle East, but today America, Mexico, Spain, and China are great producers of the honeydew melon.

One great thing about honeydew is that it's full of water. This helps keep you hydrated. It's also low in calories.

Honeydew is rich in vitamin C, which helps your immune system fight off sickness and keeps your skin healthy. It also has vitamin B6, which helps your brain work well and gives you energy. There's even a small amount of vitamin K, which helps your blood clot and keeps your bones strong.

Honeydew also has important minerals like potassium, which helps control your blood pressure and keeps your heart healthy. You'll also get magnesium, which supports your muscles and nerves, and folate, which is important for making new cells.

Adding honeydew to your meals is easy. You can eat it by itself, mix it in a fruit salad, or even blend it into a smoothie. However you enjoy it, honeydew is a delicious way to stay healthy!

## Recipe— Honeydew Sorbet

### Ingredients:

- 1 honeydew melon
- 1 tablespoon lemon juice
- 2 teaspoons maple syrup or honey

---

*Recipe Received From: <https://iheartvegetables.com/honeydew-sorbet/>*

---

### Instructions:

1. Slice the honeydew into 1" chunks and spread out on a baking sheet.
2. Put it in the freezer for 4-6 hours until frozen.
3. Once frozen, put the chunks in the blender with the lemon juice and sweetener.
4. You may need to add a couple tablespoons of water to help it to start blending.
5. If you don't have a high-powered blender, you can make this in a food processor.
6. Blend until smooth.
7. Put it back into the freezer for another 30 minutes until it sets.

Scoop & serve!
