Small Smart Substitutions

Are you craving high fat, high sodium, or sugary foods? When eating these foods often, currently because often holiday season, cravings for these kinds of foods are strong. These cravings can last for a long time if you do not curb them quickly. Substituting out foods for smarter, healthier food choices can have you taking charge of the cravings.

Fat is important in a healthy diet. However, too much fat can account for an excessive number of calories which can pack on the pounds. Out of all the macronutrients (fat, protein, and carbohydrates), fat contains 9 calories per gram where the others only have 4 calories per gram. Of the three macronutrients, we need the least amount of calories from fat. Since fat has the most calories per gram and we need the least in terms of macronutrients, fat should be on the top of the list for making substitutes.

Small Smart

(Continued from Page 1)

Substituting foods high in fat for foods that have no or lower fat can be easier than you think. Choosing foods like low-fat dairy or using less oil when cooking are the most common methods for reducing the amount of fat. Also, choosing foods that are baked instead of cooked in fat/fried. With the holiday season, other items that are high in fat include pie crust, mayonnaise, chips, and sweet treats to name a few. Substituting Greek yogurt in place of mayo and sour cream is an easy step for lowering the amount of fat while increasing protein in certain recipes. Other substitutions would be trading chips for baked chips, trading French fries for baked sweet potato fries, and frostings for whipped cream. Find the foods that are most predominate in your diet and start there.

Foods high in sodium are usually easy to identify because of the salty taste and are at the top of foods to crave. Even though sodium doesn't add any calories, many high calorie foods are loaded with sodium. Sodium is a major problem in those who have hypertension or cardiovascular disease. Here are a few small changes, salted nuts to unsalted nuts, breaded meats to grilled meats, canned products to fresh or frozen products, and the list goes on.

Last and certainly not least, sugary food craving are strong after indulging for weeks during the holiday season. Baking cookies, fudge, hard candies, and chocolate treats are a part of many family traditions and deserve to be carried on. The after effects of eating so much sugar can be compared to a caffeine addiction. When moving from sugary treats to other sweet items it is very important to get out of the endless sugar cravings. Good options are fruits in any form, lightly sweetened dairy, frozen yogurt, and even sweet potatoes.

The holidays are filled with higher amounts of fat, sodium, sugar, and when transitioning back to healthier foods it can be made easier with small smart substitutions. Start off the new year by making small smart substitutions to get back on the right healthy food choices track.

*January Vitamin B12 Recipe***Baked Salmon with Yogurt and Cheese**

(Serving Size: 4 ounces, Yield: 2 Servings)

Ingredients

8 ounces of salmon, thawed
¼ cup nonfat plain Greek yogurt
¼ cup Parmesan cheese
½ teaspoon dried dill
1 tablespoon lemon juice

**Directions**

1. Heat oven to 425 F.
2. Place salmon in a casserole dish, skin side down if skin is included.
3. Mix all remaining ingredients in a small mixing bowl.
4. Spoon the yogurt and cheese mixture over the salmon.
5. Cover the casserole dish with aluminum foil.
6. Bake for approximately 15 minutes, removing the foil during the last few minutes to allow the yogurt and cheese mixture to brown.

NOTE: Cooking time will vary depending on the thickness of the salmon. The internal temperature of the fish should be 145 F, and it should easily flake.

Health Motivator Tips

January

Vitamin B12

By Lorrie Wright, WVU Extension Agent – Mason County

Monthly Challenge: Make a conscious effort to include foods high in vitamin B12 in your daily diet.

Health Motivator Talking Points

- Cobalamin, otherwise known as vitamin B12, is a vital nutrient necessary for the production and cell metabolism of red blood cells, healthy nerve function, the production of DNA and provides energy.
- Since vitamin B12 is not produced in the body, we must obtain it in our diet. Naturally occurring vitamin B12 is limited to animal products and fortified plant products. Harvard Health Publishing lists some common foods we might eat to reach our daily requirement: beef liver, salmon, canned tuna, beef, eggs, fortified cereals, nonfat plain Greek yogurt and low-fat milk.
- While most people consume enough of the daily requirement, deficiency can be common. Some factors that can increase your risk of deficiency are being over the age of 50, surgical removal of parts of your stomach, use of alcohol, practicing a strictly vegan lifestyle, certain medical conditions such as Crohn's disease, pancreatic disease, diabetes, pernicious anemia, gastric cancer, multiple sclerosis and H. pylori infection.
- Some medications, such as proton pump inhibitors and other stomach acid-reducing drugs, Metformin and other diabetes drugs, and the anti-inflammatory drug Colchicine, can interfere with the digestive system leading to malabsorption.
- Health conditions linked to vitamin B12 deficiency may include anemia, a swollen or inflamed tongue, fatigue, difficulty walking, muscle weakness, numbness or tingling in your extremities, constipation and difficulty with concentration.
- If you are at higher risk of deficiency, talk to your doctor about taking a supplement.

Chuckle of the Month:

A friend of mine sells supplements for a living and he stopped by the house. My wife answered the door. I yelled to her to "go ahead and vitamin."

Quick Club Activity:

With a water bottle in each hand, put both arms straight out and palms down. Slowly move arms up and down 10 times. Repeat with palms up. Then put your arms in the front of your body and do again.
